

Angus Grey

BSc

Senior Forestry Consultant, Scotland

07970 938429
angus.grey@bidwells.co.uk

Angus recognises the importance of his role in delivering well-managed, sustainable forestry which will benefit generations to come

Growing up in rural Highland Scotland and with experience in the public and private forestry sectors, Angus has always been involved with the management of forestry and has a wide understanding of the myriad considerations of planning, funding and managing this high value asset.

Angus enjoys the challenge of his work and interacting with the many people he comes into contact with throughout the course of his role. He values the contribution each one makes to the sector, recognising that forestry is comprised of many stakeholders and interests.

Specialising in woodland creation, Angus is involved with the day to day management of forestry operations for a variety of clients. He has a sound understanding of operational forestry, current grant schemes and regulations which is invaluable when advising clients.

Angus is currently assisting with the enablement of sites for sustainable woodland creation and is an advocate for well managed and sited, productive forestry. Crucially, he takes pride in managing a sustainable asset which can be passed on to the next generation.

Key relevant project experience

Woodland Creation

Leading on several woodland creation projects across Perthshire and the Highlands. Having previously worked for the Perth and Argyll Conservancy, Angus has a sound knowledge of the current FGS grant scheme and the processes involved with gaining approval for afforestation.

Forestry Management

Ongoing management of several thousand hectares of forestry. These properties involve a mix of both commercial and native woodlands.

Windfarm Development

Delivering professional advice on EIA chapters for windfarm development within forestry across various sites in the south of Scotland.
