

Ben Griffin

BSc (Hons) Forestry

Senior Forestry Consultant, Scotland

07814 938818

ben.griffin@bidwells.co.uk

Ben looks at the big picture when it comes to forest management, understanding the multiple objectives and offering expert advice

With in-depth experience of forest planning, research and tree health, Ben is also competent in the use of GIS and he brings this specialist, sought-after knowledge to our thriving forestry team. Based in Inverness, he works throughout the north and west of Scotland.

Ben's broad understanding of forest management, silviculture and the associated complex grant system enables him to advise clients on how to get the most out of their asset through careful planning, maintenance and improving the resilience of the forest.

As a specialist in forest planning, he also enjoys the operational and problem-solving aspect of forest management and likes being part of a forest's journey - through harvesting, replanting and establishment of new trees.

Ben is used to accommodating many different objectives in a single forest asset - improved biodiversity and conservation, recreational opportunities and benefits to the local economy - but is also highly focussed on delivering a commercial benefit to the client.

Key relevant project experience

- Producing forest plans for government organisations and private owners
- Woodland creation applications and management
- Procuring, delivering and undertaking all types of forest surveys in the UK and abroad
- Advising forest managers on tree health policy and practice
- Managing environmentally sensitive forest operations
