## Sam's forestry experience, gleaned from various positions across the UK, gives him the edge in this fast-paced sector.

Equally at home handling a chainsaw as he is with a discounted cash flow, Sam's expertise includes on-the-ground forestry management, valuation and acquisition of assets for large investors. And this comprehensive skill set allows him to ably deliver a high-quality service for a range of clients.

Having worked in a variety of environments - including a World Heritage Site – Sam's holistic understanding and practical know-how of strategic forestry management, associated markets, industry drivers and policy, makes him an intrinsic part of our highly successful forestry team.

He doesn't shy away from a challenge and has been involved at the outset of establishing a new forestry management business which required networking, building stakeholder relations and long-term working partnerships as well as building a client base from scratch and meeting ambitious targets.

Thriving in his specialist area of valuations and acquisitions from small properties to large portfolios – and all the challenges involved – Sam works closely with our natural capital & sustainable investment and energy & renewables teams to deliver industry leading advice and service to clients.

### Key relevant project experience

Supporting the annual valuation for some of the UK's largest private forestry investors and unitised forestry funds.

Supporting the geographic expansion of commercial forestry portfolios for large private and fund management investors through acquisition of forestry and bare land for planting.

Managing commercial forestry investment properties ranging from North England, South Scotland and Central Scotland.

Overseeing the delivery of a range of forest plans for commercial plantations and family estates, balancing commercial production, access provision, conservation and wider owner objectives.

Development, management, and auditing of compliance systems to ISO, BS, and UKWAS standards.
